

# Bure Double

ELECTRIC

Bure Double is GATE's most advanced, flexible StandTall Walker. It is equipped with twin electric drives for raising and lowering the table and widening the walking frame.

## Sustainable

The StandTall Walker has an extra reinforcement band around the armrest cushions to prevent splitting from side impacts.

## Easily reachable hand control

The hand controls are located so that both of the carer's and user's hands can easily reach them.

## Flexible stepless adjustment

Electrically driven height adjustment makes it easy to pre-set the StandTall Walker to the desired height. Once the patient is standing in position the height can be steplessly adjusted for best comfort and optimal walking support.

## Power Rise

Bure Double provides excellent assistance for helping patients stand up. Personnel burdens, and thus repetitive strain injuries, are minimized. Some patients can even get up on their own with the assistance of the StandTall Walker.

## Brakes and directional locks

There are optional one or two-handed brakes that can be positioned so that the user can reach them from the walking position. The handbrake acts on the rear casters and the brake assembly also includes directional locks that make it easier for the user to stay on course when walking.

## Eminently suitable at home

Because Bure Double is so flexible it is eminently suitable for the home environment. With the frame arms in the inner position the StandTall Walker is narrow, easy to manoeuvre and able to negotiate most doorways.

## Water proofing

All Bure Double electrical components have IP 66 international protection ratings and can occasionally be used in damp areas.

## Ergonomic handles

The ergonomically designed handles are steplessly adjustable in every direction for optimum individual adaptation. This is extremely important for stroke patients who can thus reach their "usual" hand position.

## Lowest height

Bure Double can be lowered to 88 cm and as such is the lowest of all GATE StandTall Walkers.

## Stable

The StandTall Walker has anatomical cushions that provide relief for shoulders, arms and the neck and shift the focus to larger muscle groups such as leg and chest muscles instead. This improves stability and makes the walker easier to steer.

## Open design

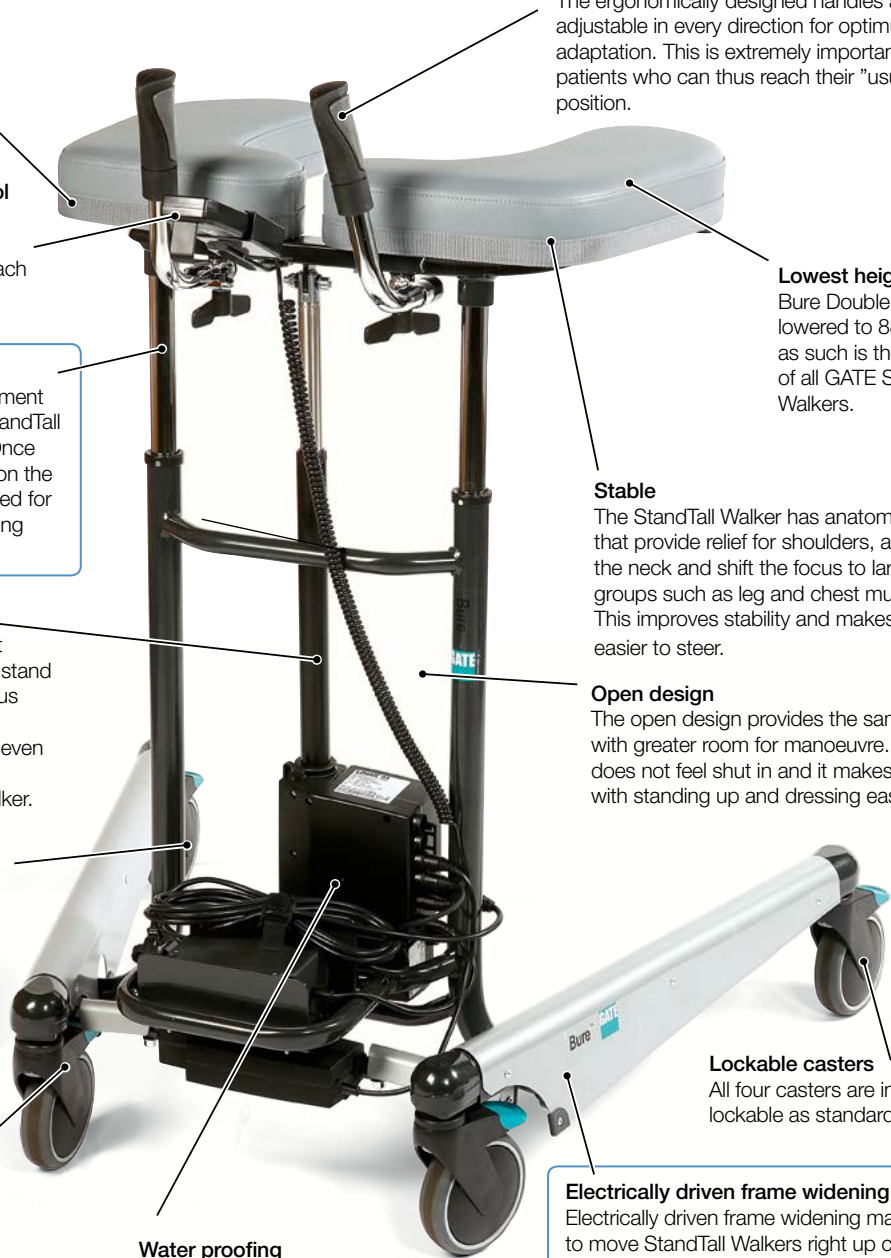

The open design provides the same stability but with greater room for manoeuvre. The patient does not feel shut in and it makes assistance with standing up and dressing easier.

## Lockable casters

All four casters are individually lockable as standard on Bure Double.

## Electrically driven frame widening

Electrically driven frame widening makes it easy to move StandTall Walkers right up close to users without worrying about wheelchairs, beds or chair legs. This also helps personnel assist patients to stand up. With the frame in its outer position the StandTall Walker is extra stable and can be used to best advantage by the patient, which helps those who need extra walking space.

All walkers may be ordered with 75, 100 or 125 mm castors – specify when ordering. (The heights dimensions below refer to products with 125 mm castors unless otherwise specified).

## Technical specifications

CE CE marked according to MDD 93/42/EEC.

Part No.	Product	Width	Max user weight	Length	Height	Armrest/internal dimension
56-313	Bure Double ELECTRIC	65-90 cm	130 kg	81 cm	88-128 cm	30-48 cm
