

Electric walking frame widening

Bure Rise & Go DB

StandTall walker with power rise

The Bure Rise & Go is a cost-effective walker enhanced with a patented power rise function. Thanks to the electric power rise function, Bure Rise & Go acts as a combined stand-up, mobility and walking aid all in a single product. Rise & Go is now also available with electric walking frame widening. Flexible widening combined with the lower height above the walking frame enhances versatility regardless of the patient's situation in hospital or at home.

Easily reachable hand controls

The hand control is located such that both of the carer's or user's hands can easily reach them.

Ergonomic handles

Ergonomically designed handles that are steplessly adjustable in every direction for optimum individual adaptation. This is extremely important for stroke patients who can thus reach their "usual" hand position.

Folding armrests

Bure Rise & Go's anatomically designed armrests can be folded out to provide the user with an easy means of reaching the handles during the standing manoeuvre.

Stable

The walker has anatomical cushions that provide relief for shoulders, arms and the neck and shift the focus to larger muscle groups such as leg and chest muscles instead. This improves stability and makes the walker easier to steer.

Flexible stepless adjustment

Electrically driven height adjustment makes it easy to pre-set the walker to the desired height. Once the patient is standing in position the height can be steplessly adjusted for comfort and the proper support for an optimal walking configuration.

Power Rise

Bure Rise & Go is a unique aid for assisting patients or users during the standing maneuver. Personnel burdens, and thus repetitive strain injuries, are minimized.

Waterproofing

All Bure Rise & Go electrical components have IP 65 international protection ratings and can therefore be used in wet spaces.

Low height

The low height above the floor minimizes problems such as getting close to the user e.g. when he or she is sitting on a bed.

Open, reinforced design

The open design provides the same stability but with greater room for manoeuvre. The patient does not feel shut in and it makes assistance with standing up and dressing easier. Bure Rise & Go is also reinforced and extended for extra stability during the standing manoeuvre.

Sustainable

The walker is designed to last a long while. For example it has extra reinforcement bands around the arm rest cushions to prevent them from splitting from impacts to the side.

Unique power rise harness

The power rise harness is designed to reach as far down across the bottom as possible. This provides optimum support which results in a natural standing action.

Leg support for the standing manoeuvre

Bure Rise & Go is fitted with leg supports that make for a better standing maneuver; they are height adjustable and can be moved aside simply to create greater space.

Lockable castors

Bure Rise & Go has four individually lockable castors as standard.

Electrically driven frame widening

Electrically driven frame widening makes it easy to move StandTall Walkers right up close to users without worrying about wheelchair width, bed construction or seat width. This also helps personnel assist patients to stand up. With the frame in its outer position the StandTall Walker is extra stable and helps those who need extra walking space.

Technical specifications

CE Tested and approved according to SS-EN 12182:1999
