

# Bure Double 2.0

The new Bure Double is equipped with twin electric drives for raising and lowering the walker and widening the walking frame. The new version has a significantly lower height above the walking frame for better access and a higher user weight (150 kg) compared to the earlier version.

**Sustainable**

The StandTall Walker has an extra reinforcement band around the arm rest cushions to prevent them from splitting from impacts to the side. Armrests in PU foam are available as an alternative for additional comfort/hygiene.

**Height-adjustable handles**  
See accessories.

**Ergonomic handles**

Ergonomically designed handles are steplessly adjustable in every direction for optimum individual comfort. This is extremely important for stroke patients who can thus reach their "usual" hand position.

**Easily reachable hand controller**

The hand controller is located such that both of the carer's and user's hands can easily reach it.

**Flexible stepless adjustment**

Electrically driven height adjustment makes it easy to pre-set the walker to the desired height. Once the patient is standing, the height can be finely adjusted so the walker is comfortable to use and provides the best support for walking.

**Power Rise**

Bure Double provides excellent assistance when helping patients stand up. The strain on personnel, and thus repetitive strain injuries, is minimised. Some patients can even get up on their own with the assistance of the walker.

**Stable**

The walker has anatomical cushions that provide relief for shoulders, arms and the neck, and shift the focus to larger muscle groups such as leg and chest muscles instead. This improves stability and makes the walker easier to steer.

**Open design**

The open design provides the same stability but with greater room for manoeuvre. The patient does not feel shut in and it makes it easier to help with standing up and dressing.

**Low height**

Low ground clearance makes it easy to get close to patients e.g. when they are sitting on their beds.

**Lockable castors**

All four castors are individually lockable as standard on Bure Double.

**Eminently suitable at home**

Because Bure Double is so flexible it is eminently suitable for the home environment. With the frame arms in the inner position the StandTall Walker is narrow, easy to manoeuvre and able to negotiate most doorways.

**Waterproofing**

All Bure Double electrical components have IP 65 international protection ratings and can therefore be used in wet spaces.

**Electrically driven frame widening**

Electrically driven frame widening makes it easy to move the walker right up close to users without worrying about wheelchair width, chair width or bed design. It also helps personnel assist patients to stand up. With the frame in its outer position, the walker is even more stable and can be used to best advantage by the user and it also helps patients who need extra walking space.

**Technical specifications**

Part No.	Product	Width	Max user weight	Length	Height	Armrest/Internal dimension
56-303/75	Bure Double 2.0 EL, 75mm castors	64-95cm	150kg	87cm	85-125cm	25-50cm
56-303	Bure Double 2.0 EL, 125mm castors	64-95cm	150kg	87cm	90-130cm	25-50cm

All walkers may be ordered with 75, 100 or 125mm castors – specify when ordering. (Unless otherwise specified, the heights shown below refer to products with 125 mm castors). Examples of possible parts combinations are shown below.
